

c) accumulating a score for at least one indicator based upon the received answer,

d) repeating steps a through c for each question in a series of questions that make up the assessment, and

A3 e) transmitting at least one indicator level based on the at least one indicator score to the individual; and

wherein for each of the at least one indicator, there is at least answers to two questions that will result in the indicator.

---

21. (Amended) The method according to claim 16 further comprising providing educational material to the user about asthma.

A4 22. (Amended) The method according to claim 21, wherein the providing educational material step includes material tailored to the at least one indicator level of the patient.

---

Please add new claims 35-40 as follows:

--35. (New) A method for assessing the severity of asthma for a patient comprising:

setting a score for at least two indicators to zero,

asking a plurality of questions,

for each answer to one of said questions, adjusting the score for at least one indicator where said indicator is predetermined to relate to the question for which the answer was provided,

A5 determining an indicator level for each indicator based on comparing that indicator to a predetermined scale, and

providing the indicator level for each indicator.

36. (New) The method according to claim 35, wherein the at least two indicators include at least one of a severity level, a compliance level, and a performance level.
